ASSIGNMENT - 2

NAME : Papisetty Anushka

REG NO : 9923005116

SEC : ECE, C sec

AI-Powered Customer Support Ticket Classification

Goal: Take disorganized customer support emails and transform them into structured support tickets, generate a professional customer response, and include a mandatory self-review stage to ensure the final reply is accurate, clear, and customer-friendly.

Step 1: Structuring & Planning (The Setup)

Goal: Establish the AI as a customer support assistant and organize raw customer complaints into a structured support ticket. This step identifies the issue type, priority, and key details before generating a response.

> **Prompt 1:**
>
> Act as an expert customer support assistant. I am going to give you raw, messy customer complaint emails. Your task is to identify the issue category, priority level, customer summary, and suggested resolution.
>
> Input: Raw customer complaint email
>
> **Expected AI Output**:
>
> Issue Category (Refund / Delivery / Payment / Product)
>
> Priority Level (High / Medium / Low)
>
> Customer Summary
>
> Suggested Resolution

Step 2: Drafting (The Execution)

Goal: Generate the customer support response using only the structured ticket created in Step 1.

> **Prompt 2:** Excellent. Now, using only the structured ticket you just generated, write the first draft of the customer support email.
>
> Constraints:
>
> Keep the tone professional and friendly.
>
> Use short paragraphs (maximum 3 sentences each).
>
> Do not exceed 150 words.
>
> Include a ticket reference number.
>
> **Expected AI Output**: A complete first draft of the customer support email following all the above constraints.

Step 3: Critique and Refinement (The Required "Gate")

Goal: Force the AI to evaluate its own customer support response against specific quality criteria and improve it before sending.

> **Prompt 3:** Before we finalize this, act as a strict senior support manager. Review the draft you just wrote against the following checklist:
>
> Checklist
>
> Did you classify the customer's issue correctly?
>
> Is the tone polite, professional, and empathetic?
>
> Are the next steps and resolution clearly explained?
>
> Is the response within the 150-word limit?
>
> **Expected AI Output**:
>
> A short self-critique identifying any issues.
>
> A corrected and finalized customer support email.
